

# Halls of Imagination

NFT COLLECTION

By MLN Token

December 2021

## Halls of Imagination

Halls of Imagination is an incredible collection of unique and captivating NFTs. As the name implies, the collection expresses the highest levels of creativity, imagination, and inspiration using cutting-edge blockchain technology.

It is an NFT collection like none other. Every NFT is an ornate work of art that serves as an access key to many people who share a similar appreciation for art and technology. They also double as a lucrative investment vehicle when considering the explosive growth of the NFT industry.

We built the Halls of Imagination NFT project on the principles of self-expression. We believe that every person in the world is special, that we all possess unique qualities that make us one of a kind, and everyone should be encouraged to showcase their 'specialness.'

We advocate for freedom of expression; nobody should be marginalized for speaking their truth. On the contrary, we should spend every day sharing our uniqueness with the world without inhibition or apprehension.

This belief gave birth to the Halls of Imagination NFT collection. The collection is an assortment of numerous masterpieces, all creations of the artist's imagination and creativity; his uniqueness.

The Halls of Imagination NFT project is a beneficiary of The Moon Light Night (MLN) project's sponsorship. MLN is a revolutionary launchpad that helps talented artists get the recognition they deserve and connect them with the opportunities they need to advance their careers.

The MLN project is the confluence where artists can connect directly with art collectors, private investors, and other key players in the global art market. Becoming a

part of the Moon Light Night project is seamless for artists. All they need to do is register on the platform and upload a sample of their artwork.

The Moon Light Night project is built on the XRP ledger, an open-source, public blockchain that facilitates lightning-fast worldwide payments. It is a cost-efficient network that can handle thousands of transactions simultaneously without downtime.

## **MINTING NFTs ON THE XRP LEDGER.**

Ripple Labs, the company behind the XRP ledger, announced a \$250 million fund to provide targeted support for creators, brands, and marketplaces.

The fund announced in September 2021 is to allow community members to explore new use cases for NFTs on the XRP Ledger leveraging its inherent advantages of speed, cost, and sustainability.

Ripple Labs is also heavily invested in facilitating the creation/proliferation of NFT marketplaces where interested buyers and sellers can trade NFTs for fiat or cryptocurrencies.

In July 2021, Ripple took part in a \$13 million funding round for Mintable, a leading NFT marketplace headquartered in Singapore. This strategic alliance will facilitate the integration of the XRP ledger on Mintable so that NFT buyers and sellers can enjoy low transaction fees and lightning-fast transactions without hurting the environment.

The company is determined to partner with other NFT marketplaces like OpenSea, Rarible, Axie, SuperRare, Foundation, Binance, etc., to fast-track the adoption of the XRP ledger in the creation and sales of NFTs.

On 11th November 2021, the Sologenic Development Foundation (SDF) announced they are building a new NFT marketplace on the XRP ledger. The NFT marketplace will be a part of the Sologenic DEX, a popular decentralized exchange where various tokenized assets and cryptocurrencies are traded.

The Sologenic Development Foundation also announced that they would airdrop approximately \$250 million to XRP/SOLO holders on 24th December to stimulate user engagement and participation in its upcoming NFT marketplace.

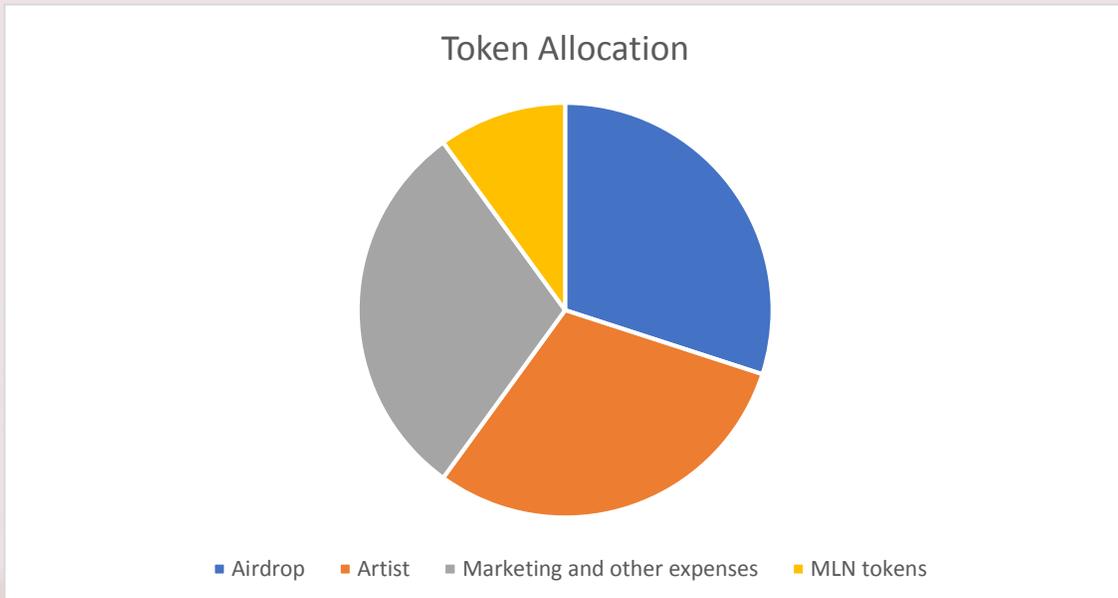

## TOKENOMICS

As mentioned in the previous sections, the first batch of NFTs in the project comprises two hundred Halls of Imagination NFTs. We will release \$NET tokens instead because the XRP marketplace is still in the works.

The \$NET token is used as the default currency during airdrops and presale events for projects launched on the MLN platform. One \$NET token is equivalent to 0.01XRP. This first batch of two hundred Halls of Imagination NFTs is worth 100,000 XRP. In other words, each Halls of Imagination NFT will go for the price of 500XRP. So, we will release 10 million \$NET tokens to account for the 100,000XRP cost of the whole collection.

- We will airdrop thirty percent (3,000,000) of the \$NET tokens to unlimited trustlines. All trustlines must hold at twenty-five Moon Light Night tokens to qualify for this airdrop.
- Thirty percent (3,000,000) of the \$NET tokens will be reserved for the artist(s) behind the project. This allocation is in line with the mandate of the Moon Light Night platform to create recognition and wealth for talented artists.
- Another thirty percent (3,000,000) of the \$NET tokens will be allocated to offset marketing costs and all other expenses involved in the successful launch and continuous smooth running of the Halls of Imagination NFT project.
- The final ten percent (1,000,000) will be reserved in the form of MLN tokens. This provision is because Moon Light Night is a sponsor and facilitator of the Halls of Imagination NFT project.

## ROADMAP

- The token airdrop event: Here, we will airdrop \$NET tokens to unlimited trust lines under the condition that they have \$NET and hold at least twenty-five Moon Light Night \$MLN tokens in their wallet.
- Official Website: We will also launch the Halls of Imagination NFT project's official website on the date of our airdrop event. So, every member of the Halls of Imagination community can enjoy unfiltered access to all parts of the project moving forward.
- Complete the creation of two hundred Halls of Imagination NFTs while we await the official launch of XRP's NFT marketplace, where members of the Halls of Imagination community can trade their tokens for NFTs and vice versa.
- Continue with creating more Halls of Imagination NFTs after the successful sale of the first batch of two hundred Halls of Imagination NFTs.

## The Artist

Ildar is the name of the gifted artist behind the Halls of Inspiration NFT collection. He is a passionate artist who began painting at a very tender age and has been painting all his life.

After completing his higher education, he served in the army as a member of the airborne troops. However, his passion for art led him back to digital art tools, and now, he makes skins for 'Counter-Strike: Global Offensive,' a world-famous video game. He also doubles as a tattoo artist and lives in the beautiful city of Kirov in Russia.
